

LADEE IS FLYING THIS YEAR *AND* WE NEED YOUR HELP.

meteorcounter.com

During the LADEE Mission, NASA would like to have as many people as possible submitting meteor counts so scientists can compare that data to what LADEE's instruments record. And there's an app for that. Meteor Counter is a free app developed by NASA. It allows observers to use their iPhones and Android phones to easily record meteor count observations and send their data directly to NASA.

NASA.GOV/LADEE

LADEE, the Lunar Atmosphere and Dust Environment Explorer is a space exploration mission led by NASA Ames Research Center in collaboration with NASA Goddard Space Flight Center. LADEE is a robotic lunar orbiter that will fly low into the Moon's atmosphere to sample its composition and structure and look for dust lofted into the lunar sky.

BE A PART OF NASA METEOR RESEARCH. NO TELESCOPES NEEDED.

When you go out to watch a meteor shower, bring your smart phone with you. With Meteor Counter, you can easily capture meteor observations with an innovative "piano key" interface. As you tap the keys, Meteor Counter records critical data for each meteor: time, magnitude, latitude, and longitude, along with optional verbal annotations. Afterward, these data are automatically uploaded to NASA researchers for analysis.

Meteor Counter available for download:
